

AIR FRAME

Dual – Band Wireless Frame Router

Overview

AirFrame is a home use wireless router. With 802.11ac technology, the AirFrame takes Wi-Fi speeds over the top. Now you can reach data rates of up to 733Mbps, which means up to 2x faster Wi-Fi. Featuring simultaneous dual-band 802.11ac Wi-Fi. That means it transmits at both the 2.4GHz and 5GHz frequencies at the same time. So no matter which band your wireless devices use, they'll automatically connect to the best available band for the fastest possible performance.

The AirFrame is designed as a stylish photo frame, allowed user to put the 6 inches photo into it and also easily to change it, thus making the router a good looking homeware while providing better wireless coverage.
